

# **Transmission: The Enabler of Affordable Renewables and Economic Development for Generations to Come**

January 2012

# Major Transmission Proposals in the Northeast

# Transmission Implications

- Expansion of East-West and North-South transmission in Northeast enables up to 6000MW of new wind.
- Choice does not have to be wind or hydro... it could be both.
- Collectively, these projects and the wind they enable create economic opportunities for generations to come.
- New York has already committed to an “energy highway...” When Massachusetts and New England join, the renewables industry of the Northeast will finally have a global scale...
